PRIMARY EXAMINER

Allowable subject matter

Claims 1-6 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art neither discloses nor suggests the following limitation in the independent claim 1:

A switching regulator operable to apply an output voltage based on a power-supply voltage received from a DC power supply provided in an outside thereof, said light-emitting diode to supply a supply current to said light-emitting diode; an abnormal state detector operable to detect an abnormal state of said lighting circuit based on at least one of said output voltage of said switching regulator, said supply current and said power-supply voltage; and an output controlling unit operable to control said output voltage of said switching regulator based on said supply current or said output voltage of said switching regulator and to lower said output voltage of said switching regulator in a case where said abnormal state detector detected said abnormal state such as required by claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Roller et al. (6,653,789) discloses a multi-regulator circuit LED lamp comprising a voltage regulator for operating the lighting over a range of voltages by sensing the selected parameters on the resistors but does not disclose any fault detection and a DC power supply. Chopra et al. (6,286,976) discloses a vehicle system comprising a DC source, a LED array load, a battery pack as a switching regulator, a charging and supply circuit for detecting the overload current from the battery source but not the output voltage of the switching regulator. Patel et al. (6,191,541) discloses a solid state tail light for aircraft comprising a LED lamp and a temperature detection circuit but fails to disclose a circuit for detecting the output voltage of the switching regulator.
